AI SUMMARY

AI-Generated Summary

Overview of Search Results – "test cases"

The list contains 19 test-case entries (IDs TC_001-TC_073) all belonging to the "Registration" module of a healthcare system. They cover a broad spectrum of functional areas, grouped roughly as follows:

I Category I Test-Case IDs (sample) I Focus I

I "Core Registrations" I TC_001, TC_003, TC_012, TC_010, TC_015, TC_014, TC_019 I Normal, PRN, International, Corporate, Campaign, Event, Emergency registrations and UHID/ERN generation. I

I "Quick/Streamlined Registrations" I TC_013, TC_014, TC_015 I Fast-track UHID creation via Quick, Event, or Campaign pathways. I

I "Special Conditions" I TC_068 I Handles patient condition "Dead/Brought Dead" during normal registration. I

I "Search & Retrieval" I TC_007, TC_073 I General patient search and enterprise-level search functionality. I

I "Cancellation & Billing" I TC_025, TC_046 I Ability to cancel a registration and generate the associated registration bill. I

I "Reporting & Statistics" I TC_045, TC_054, TC_050, TC_052, TC_051 I Reports on registration count, statistics, specialty-wise, department-wise, and doctor-wise registrations. I

I "Master Data Management" I TC_041 I Creation and validation of new demographic values (Patient Type) on the registration screen. I

Key take-aways

All test cases are centered on "patient registration workflows", from initial entry (normal, PRN, international) to special scenarios (emergency, dead patients) and auxiliary functions (search, cancellation, billing).

A substantial portion (~30%) validates "reporting" capabilities, ensuring that registration data can be aggregated by count, specialty, department, doctor, or overall statistics.

The suite also includes "master-data validation" (TC_041) to confirm that new patient-type values propagate correctly to the registration UI.

IDs are sequential but not contiguous, indicating a larger test-case repository where only a subset relevant to registration is displayed.
