

Basic text chat:

The screenshot displays a REST client interface with a sidebar on the left containing a tree view of collections and environments. The main area shows a POST request to the endpoint `POST {{base_url}} /v1/chat/completions`. The request body is a JSON object:

```
1 {
2   "model": "{{chat_model}}",
3   "messages": [
4     {
5       "role": "user",
6       "content": "Explain API testing in simple terms."
7     }
8   ],
9   "temperature": 0.2,
10  "max_tokens": 200
11 }
```

The response is a 200 OK status with a JSON body:

```
1 {
2   "id": "20260903_e88a6c4c-1b7f-4aff-8417-2ac4569cf4ef",
3   "choices": [
4     {
5       "finish_reason": "length",
6       "index": 0,
7       "logprobs": null,
8       "message": {
9         "content": null,
10        "refusal": null,
11        "reasoning_content": "The user asks: \"Explain API testing in simple terms.\"\n\nContext: No developer concept check needed; it's a straightforward question.\n\nWe need to provide a simple explanation of API testing - what is API, why test it, what aspects are tested, typical methods, tools, best practices, maybe use cases.\n\nBut the prompt: \"Explain API testing in simple terms.\"\n\nThus a simple explanation with analogies, maybe a diagram, but likely textual. Should be accessible to non-technical audience but also maybe a beginner developer.\n\nWe need to keep it simple, avoid jargon, use everyday analogies.\n\nWe can talk about an API as a waiter at a restaurant: you (client) place order via menu (API spec) and get food (data). API testing is checking if the waiter correctly delivers the right order, doesn't get those wrong, handles errors
```

Multi-turn conversation

The screenshot displays a REST client interface for a multi-turn conversation. The top bar shows a list of requests, with the current one being a POST request to `{{base_url}} /v1/chat/completions`. The request body is a JSON object with the following structure:

```
1 {
2   "model": "{{chat_model}}",
3   "messages": [
4     {
5       "role": "system",
6       "content": "You are a helpful QA assistant."
7     },
8     {
9       "role": "user",
10      "content": "What is regression testing?"
11    },
12    {
13      "role": "assistant",
14      "content": "Regression testing checks that existing functionality still works after changes."
15    },
16  ]
17 }
```

The response is a 200 OK status with a response time of 2.24 s and a size of 2.2 KB. The response body is a JSON object with the following structure:

```
1 {
2   "id": "20260903_8a62e6cf-3acf-4afe-819b-b7567fb48cc1",
3   "choices": [
4     {
5       "finish_reason": "length",
6       "index": 0,
7       "logprobs": null,
8       "message": {
9         "content": null,
10        "refusal": null,
11        "reasoning_content": "1. **Deconstruct the User's Request:**\n * **Core Task:** Provide three examples of regression testing.\n * **Implicit Need:** The examples should be clear, relatable, and distinct enough to show different contexts where regression testing is used. They should illustrate *why* regression testing is necessary.\n * **User Persona:** Likely a student, a junior developer, a product manager, or someone new to software testing. The language should be accessible, not overly jargon-heavy.\n * **Original Question:** \"What is regression testing?\" -> \"Give me three examples.\" This is a follow-up. The user wants concrete illustrations of the abstract concept.\n\n2. **Brainstorming Core Concepts & Examples:**\n * **What is Regression Testing? (Basic):** Testing existing features to ensure they haven't
```

The bottom of the interface shows a status bar with the text "All systems are go!" and a "Globals" section.
