

Vector search:

The screenshot shows the 'Vector Search' endpoint in the RAG Backend API Collection-June. The request is a POST to `{{base_url}}/api/search` with a JSON body containing search parameters. The response is a 200 OK status with a JSON body indicating success and returning search results.

```
POST {{base_url}}/api/search
```

```
{
  "query": "user login functionality test",
  "limit": 5,
  "model": "jina-embeddings-v5-omni-nano",
  "filters": {
    "module": "Registration",
    "priority": "P1",
    "risk": "",
    "automationManual": ""
  }
}
```

```
{
  "success": true,
  "query": "user login functionality test",
  "filters": {
    "module": "Registration",
    "priority": "P1",
    "risk": "",
    "automationManual": ""
  },
  "results": [
    {
      "_id": "6a990596789a9a7f04c97096",
      "module": "Registration",
      "id": "TC_042",
      "preRequisites": "No Pre-requisite",
      "title": "Registration counter- shift Login",
      "description": "Verify user able to access Duty Roster on Shift Counter Login."
    }
  ]
}
```

BM25 search

The screenshot shows the 'BM25 Search' endpoint in the RAG Backend API Collection-June. The request is a POST to `{{base_url}}/api/search/bm25` with a JSON body containing search parameters. The response is a 200 OK status with a JSON body indicating success and returning search results.

```
POST {{base_url}}/api/search/bm25
```

```
{
  "query": "login test",
  "limit": 10,
  "filters": {
    "module": "",
    "priority": "",
    "risk": ""
  },
  "fields": [
    "id",
    "title",
    "description",
    "steps",
    "expectedResults",
    "module"
  ]
}
```

```
{
  "success": true,
  "searchType": "bm25",
  "query": "login test",
  "filters": {
    "module": "",
    "priority": "",
    "risk": ""
  },
  "results": [
    {
      "_id": "6a990588789a9a7f04c96e79",
      "module": "Laboratory",
      "id": "TC_228",
      "title": "Test slot master -Daily test",
      "description": "Verify user able to setup - Daily test",
      "steps": "1. Launch the application\n2. Login to the application with valid credentials\n3. Select Laboratory tab in patient"
    }
  ]
}
```

Create embeddings:

The screenshot shows the Postman interface for the 'Create Embeddings' endpoint. The request is a POST to '[[base_url]] /api/create-embeddings'. The body is raw JSON:

```
{ 1: { 2: "files": [ 3: "converted-1770978136766.json" 4: ] 5: }
```

. The response is a 200 OK status with a JSON body:

```
{ 1: { 2: "success": true, 3: "jobId": "job-1788445863249-jcqc5iova", 4: "message": "Embedding creation started", 5: "filesCount": 1 6: }
```

.

Deduplicate results:

The screenshot shows the Postman interface for the 'Deduplicate Results' endpoint. The request is a POST to '[[base_url]] /api/search/deduplicate'. The body is raw JSON:

```
1 { 2 "results": [ 3 { 4 "id": "TC_001", 5 "title": "Login functionality test", 6 "description": "Test user login" 7 }, 8 { 9 "id": "TC_002", 10 "title": "Login functionality test", 11 "description": "Test user login" 12 }, 13 ], 14 "threshold": 0.85 15 }
```

. The response is a 200 OK status with a JSON body:

```
1 { 2 "original": [ 3 { 4 "id": "TC_001", 5 "title": "Login functionality test", 6 "description": "Test user login" 7 }, 8 { 9 "id": "TC_002", 10 "title": "Login functionality test", 11 "description": "Test user login" 12 }, 13 ], 14 "deduplicated": [ 15 { 16 "id": "TC_001", 17 "title": "Login functionality test" 18 }, 19 { 20 "id": "TC_002", 21 "title": "Login functionality test" 22 }, 23 ], 24 "threshold": 0.85 25 }
```

.

Summarize results:

The screenshot displays the Postman interface for the 'Summarize Results' endpoint. The request is a POST to the URL '{{base_url}}/api/search/summarize'. The body is raw and contains the following JSON:

```
1 {
2   "results": [
3     {
4       "id": "TC_001",
5       "title": "Login functionality test",
6       "description": "Test user login with valid credentials",
7       "steps": "1. Open login page\n2. Enter username\n3. Enter password\n4. Click login",
8       "expectedResults": "User should be logged in successfully"
9     }
10  ],
11  "summaryType": "concise",
12  "query": "login test"
13 }
```

The response is a 200 OK with a JSON body. The response body is shown in the 'Body' tab, displaying the following JSON:

```
1 {
2   "success": true,
3   "summary": "**Search Results Overview (1 result)** \n\n **ID:** TC_001 \n- **Title:** Login functionality test \n- **Description:** Verifies that a user can successfully log in using valid credentials. \n\nThis entry appears to be a test case focused on confirming proper login behavior when correct username/password pairs are provided.",
4   "summaryType": "concise",
5   "resultCount": 1,
6   "model": "openai/gpt-oss-120b",
7   "tokens": {
8     "prompt": 112,
9     "completion": 81,
10    "total": 193
11  },
12  "cost": {
13    "input": "0.000000",
14    "output": "0.000000",
15    "total": "0.000000"
16 }
```
